 89 **poor prognosis.** (A) Representative images of high/low expression of USP21, HSP90, and HIF1A in  
 90 tumors.  
 91

## 92 **Supplementary materials and methods:**

### 93 **Cell culture**

94 Human CCA cell lines RBE, HCCC9810, QBC939, HuCCT1, and human bile duct epithelial cell  
95 HiBEC were purchased from the Chinese National Human Genome Center (Shanghai, China) and  
96 cultured in Dulbecco's modified Eagle's medium (Gibco, USA) supplemented with 10% fetal bovine  
97 serum (FBS) (Gibco, Grand Island, NY, USA) and 1% antibiotics (penicillin/ streptomycin; Gibco).  
98 293T cells were purchased from ATCC and cultured in DMEM with the same condition as CCA cell  
99 lines. All cells were maintained at 37°C in a humidified atmosphere of 5% CO<sub>2</sub>.

### 100 **Animal Experiment**

101 Six-week-old male BALB/c nude mice (GemPharmatech Co., Ltd., China) were housed under standard  
102 laboratory conditions. They were provided with adequate food and water, ambient relative humidity of  
103 50–60%, controlled temperature of 22–26 °C, and a light/dark cycle of 12 h. QBC939 and HuCCT1  
104 cells ( $5 \times 10^6$  cells/100  $\mu$ L) were injected into the flanks of BALB/c nude mice to perform the  
105 subcutaneous tumorigenesis assay. All mice were examined weekly for tumor growth and health status.  
106 Tumors were harvested after 4 weeks and their volumes were calculated according to the following  
107 formula: volume = width<sup>2</sup>  $\times$  length/2. For gemcitabine efficacy analysis,  $5 \times 10^6$  cells mentioned above  
108 were inoculated subcutaneously in mice (n=5 in each group). After 10 days of inoculation, the mice  
109 were intraperitoneally injected with PBS or gemcitabine (20 mg/kg) five times at 4-day intervals.  
110 Tumors were harvested 4 weeks after inoculation and then fixed in 4% formaldehyde.

### 111 **Colony formation assay**

112 CCA cells were seeded in a 6-well plate (500 cells/well) and cultured in 4mL of the medium at 37°C  
113 for 2 weeks. The proliferating colonies were then fixed with 4% paraformaldehyde (Beyotime, China)  
114 and stained with crystal violet (Beyotime, China). Finally, the visible colonies were photographed  
115 and counted.

### 116 **Cell counting Kit-8 (CCK-8) assay**

117 CCK8 assay kit (Dojindo, Japan) was used to assess cell proliferation. Cells were seeded in 96-well  
118 plates at  $1 \times 10^3$  cells/well. On each day of the subsequent 5 days, 100 $\mu$  medium containing 10 $\mu$  CCK8  
119 reagent was added into each well. The absorbance at 450nm was measured with a microplate reader.

### 120 **EDU assay**

121 EDU cell proliferation kit (Beyotime, China) was used for EDU assay to assess cell proliferation. Cells  
122 were planted in a 24-well plate and cultured for 24h, followed by 2h incubation with 10 $\mu$ M EDU  
123 medium. The cells were fixed in 4% paraformaldehyde for 15min and permeabilized with 0.3% Triton  
124 for 15 min. Sequentially the cells were stained with Alexa Fluor 555 azide for 30 min and DAPI  
125 Staining Solution (Beyotime, China) for 30 min in the dark. The cells were photographed under a  
126 fluorescence microscope (Olympus, Japan).

### 127 **Quantitative PCR analysis (qRT-PCR)**

128 Total RNA from CCA cells was extracted using a total RNA isolation kit (Vazyme, Nanjing, China)  
129 and cDNA was synthesized using PrimeScript RT reagents (Vazyme). RT-qPCR was performed with  
130 AceQ qPCR SYBR Green Master Mix (Vazyme, China). RNA relative expression was calculated  
131 using the  $2^{-\Delta\Delta CT}$  method with  $\beta$ -actin as an endogenous control. Primers used in this study are listed  
132 below.

### 133 **Western blotting**

134 Total protein was extracted from cell lines with NP-40 Lysis Buffer (Beyotime, China) supplemented  
135 with 1mM PMSF and 1mM Phosphatase inhibitor. The protein samples were transferred to

136 polyvinylidene difluoride (PVDF) membranes (Roche, Shanghai, China) using 10% SDS-  
137 polyacrylamide gels (Beyotime, Shanghai, China). The PVDF membranes were blocked in blocking  
138 buffer (Beyotime) for 20 min and overnight incubated with the primary antibody in dilution buffer at  
139 4 °C. Subsequently, the PVDF membrane was cultured with the corresponding secondary antibody  
140 for 2 h. Finally, the protein bands were visualized using an ECL kit (YEASEN, Shanghai, China) and  
141 a chemiluminescent gel imaging system (Vilber, Paris, France). The related antibodies were listed at  
142 the end of this file.

#### 143 **Knockdown of Target Genes**

144 Small interfering RNA (siRNA) targeting USP21, ENO1, and HIF1A were ordered from GeneChem  
145 (Shanghai, China). The cells were transfected with siRNA using lipofectamine 3000 (Invitrogen, USA)  
146 according to the manufacturer's instructions. The oligonucleotide sequences were listed below.

#### 147 **Plasmids and adenoviral infection**

148 Cells were infected with adenovirus shRNA-control (sh-NC), adenovirus shRNA- USP21, or shRNA-  
149 HSP90 (sh-USP21, or sh-HSP9), adenovirus vector (Vector), and adenovirus USP21, or USP21<sup>(C221A)</sup>  
150 (USP21, or USP21<sup>(C221A)</sup>). Full-length sequences for human USP21 and ubiquitin were subcloned into  
151 the EcoRI and NotI sites of His-, and HA-tagged pcDNA3.1 vectors (Thermo Fisher Scientific).

#### 152 **Measurements of glucose consumption and lactate production.**

153 Briefly, CCA cells were seeded in 6-well plates ( $2 \times 10^5$  cells/well), replaced with 2 ml serum-free  
154 DMEM, and the medium was collected 24h later to determine lactate production and glucose  
155 consumption respectively. Lactate and glucose levels in the culture medium were determined using  
156 kits obtained from Beyotime (S0201S) and Elabscience (E-BC-K044-S), according to the  
157 manufacturer's instructions. Glucose consumption was calculated by the difference in glucose  
158 concentration in the medium before and after cell incubation.

#### 159 **Determination of ATP content**

160 CCA cell ATP content was determined by an Enhanced ATP Assay Kit (Beyotime, China) according  
161 to the manufacturer's instructions, and the results are shown in arbitrary units.
